Name:
NetID:
1.) What is the difference between gradient descent and backpropagation?
2.) Give an example of an activation function and explain where and why we want to use activation functions in a neural network.
2.) Give an example of an activation function and explain where and why we want to use activation functions in a neural network.
2.) Give an example of an activation function and explain where and why we want to use activation functions in a neural network.
2.) Give an example of an activation function and explain where and why we want to use activation functions in a neural network.
2.) Give an example of an activation function and explain where and why we want to use activation functions in a neural network.
2.) Give an example of an activation function and explain where and why we want to use activation functions in a neural network.
2.) Give an example of an activation function and explain where and why we want to use activation functions in a neural network.
2.) Give an example of an activation function and explain where and why we want to use activation functions in a neural network.
2.) Give an example of an activation function and explain where and why we want to use activation functions in a neural network.
